We only have manufactures quoted savings we have to see this in delivery

Doubly complex is that the main hot water heating is being done with Biomass and with this the more heat you produce the more RHI you get (£0.061 per Kw) so users utilise the system to optimise ventilation and do not worry about thermal efficiency

The few we have in place on gas tend can be on mixed sites – so its hard to get hard facts

I will ask Brian to get the literature on the 30% savings

David

Subject: 30% Gas Savings

Morning David,

Can you provide through the hard facts reference point for the 30% savings eg engineers report, burner efficiency improvement etc.

Thanks,

Niall
