Understand – and we need to find a way through this- Hot water Heating and RHI is a big attraction so existing growers will move to this – if they think they will require to turn it off to brood Turkeys they just see £ floating away.

On top of that the cost of a fleet of brooders for Turkey only in a dual house is a big cost

If we could find out if or how to Brood Turkeys using lots of Hot Air Heating with perhaps just a small amount of direct gas on their backs in pens then we may get around this – be advised what I know about Turkey Brooding would not fill the back of a postage stamp!!!!

Only getting annoyed as this is the second type of deal this week

WJ Calderwood has bent Tom's ear to get a similar deal.

And we only have a very limited number houses that can brood and when word starts to spread that they can wiggle out of brooding it becomes very difficult.
