David,

Connell is going to send through figures in the next couple of days

He will also ask DETI if he could get a concession on 99kw – long shot but you never know

Regards,

Barry

Hi Connel

I have been involved with this and its good to get a firm date

Can I suggest we look again at Nutts Corner in light of this – moving to 9 * 199kWg=h boilers at 1314 hours – then a cost per kWh above the threshold

The threshold would be 2,350,000 kwh per year – so it should still work

Happy to discuss – also conscious that a degression system may come in later in 2016 so we need to keep moving I think

Happy to discuss
