David Gibson has indicated that the capital approval exists for the s Hatchery Biomass proposals – we had thought it was too late to implement.

However I have been able to secure 2 boilers that will qualify for the RHI scheme provided they are installed by 29th Feb 2016.

The boilers are stand alone and we will have to arrange the initial install electrical 7 plumbing – they will commission and do the RHI application etc.

We don't propose to have the final plumbing install probably just water to the boiler electrical supply and then a short hot water system to heat a radiator in the boiler house as a minimum to get set up – after the rush then we would do the final install.

I will discuss on Monday just giving you a head up at this stage

David
