Irrelevant information redacted by the RHI Inquiry

Brian/Stephen - we have to get a flyer out for the next farmers meeting targeted to existing growers to encourage them to actively consider the opportunity to move to renewables NOW. Specifically explaining the 100% AHP on Hot Water Heating coupled with the RHI on Biomass Boilers.

In summary my understanding is as follows (per house)

Cost to install Hot Water £25k @ 100% AHP = £2.5k pa

Biomass Boiler cost £30k with RHI of £10 - £12k pa

Total Cost £55k annual income £14.5k = 3.8 - 4.0 years

Now this is different with 2 houses sharing one boiler (better but needs to be managed so as not to lose RHI) or 3 houses sharing 2 boilers perhaps the optimum set up. However for a flyer we need to be general I think.

We need to be clear this works for Standard+ Broiler not for Free Range (not guaranteed Day Old to Death therefore note no guaranteed heat requirement) nor for Breeders same assumptions? (Need to check this with you Brian or Danny as this is for existing conversions may have application for Rearing)
