Hi Clare

There are agricultural biomass boilers being installed at many varying capacities but I believe the RHI in N.Ireland is generally keeping these to below 99kW with the subsequent result that they are generally relying on pellets for fuel as opposed to woodchip.

Mushrooms industry is fairly well converted (99kW boilers).

Poultry industry (quite a number of farms using multiple 99kW boilers). Up to say ½ MW

Pigs,

grain drying

plant nursery

Other agricultural boilers are more akin to wood chip and we are beginning to see these now which is a good development from the sustainable biomass supply sector inc. energy crops.

320 kW Froling Boiler operating at AFBI Hillsborough

Regards

Chris
