Subject: RE: Renewable heat - final report

Dear Peter,

Please find attached the final version with the typos corrected. I have included both a word version and PDF version. Can you tell me whether you intend on publishing the full report or just the exec summary – the problem with the latter is that although you can make the summary as clear as possible, something will inevitably get interpreted the wrong way and without the rest of the detail, there is no way of checking! Perhaps it could be published as both a full report, and just the exec summary separately?

We have all enjoyed working on this report and had some interesting discussions with various people along the way. Thank you for the effort from your side in terms of chasing data and helping to make the process relatively straight forwards!

If you have any further questions on the work, please don't hesitate to call us - I am sure you will probably see Andy on and off in any case!

Best wishes,

Andrew

Subject: RE: Renewable heat - final report

Andrew,

Have had a chance to look through the final report and am content that it is now complete and that any outstanding queries have been covered, therefore the final payment can be made.

There are a number of very minor typos, if possible can you amend the following and then re-send, along with a word document version?

Pg29 – Two full stops at end of 4th paragraph.

Pg53 – “Error! Bookmark not defined” in final paragraph.

Pg66 – Numbers not aligned (Central Heating Services).

Pg134 – “Error! Reference source not found”.

I will liaise with Paula in regards to the GIS maps/data.

Thanks again for all your work on this study.

Peter

Subject: Renewable heat - final report

Dear Peter,

Please find attached the final version of the Renewable Heat report following updating with the comments and an executive summary. I am sorry it is a couple of days later than planned but the comments took some time to review and make changes, and we wanted to ensure that we had examined them all fully.

We have addressed all the comments in the separate comments document, and where required made changes to the report. As you mentioned, many of these are more comments to DETI on what needs to be done after the study, or to reinforce views. However we have reviewed all of them and commented as appropriate.

The exec summary is relatively short and gives an overview to the facts and figures, leading into the key conclusions and recommendations. We still need to provide you with the GIS diagrams which I will ask our GIS team to collate. Due to size of files, these will need to be provided on CD which we will put together next week if possible.

This has been an enjoyable (and challenging!) study to work on and I think we have all found it extremely interesting. We are obviously still happy to answer questions and discuss the report with you, and look at where some of the recommendations can be taken forwards. Andy and I am happy to discuss these with you at any time.

Best wishes,

Andrew
