

Hi Jonathan

We are heating and plumbing company and for the last few years we have been installing heat pumps and biomass boilers, with the assistance of the RHI scheme, for both domestic and commercial heat systems.

We need clarification on the date for the closure of the domestic and commercial RHI asap.

There are a lot on conflicting stories out there i.e. two days time, next week, 31st March 2016, etc

If the scheme was to close today and our current jobs cancelled we would stand to lose over [redacted] i.e. biomass boilers, pellet stores, heat pumps, boreholes, ground loops, etc in place but not finished.

If we keep working and ordering for work, already in place, to be carried out between now and the 31st March 2016 but the scheme closed before we got the work completed and the RHI application submitted we would stand to lose over [redacted].

While losing over [redacted] would be difficult to take to say the least, losing over [redacted] would put us out of business with the loss of at least [redacted]. That is why it is imperative that we get a date to work too so we can review what we can complete.

The jobs ongoing at the moment are both domestic and commercial including self build houses, apartment blocks, poultry houses, offices and workshops. We our hoping for enough time to complete work on jobs we have confirmed orders for.

We need a confirmed date of the closure of the RHI asap.

Regards

Jonathan McGroggan
