[Component plant standard definition.docx](#)

Edmund,

As discussed I have put together a layman's type guide for how we define a heating system, this is broadly what we discussed and is based on the RO interpretation of a generating station. Following discussion with Valerio who is dealing with the poultry shed amendments I have added in a section which would capture independent systems providing heat to the same volume of space. This should support our position with regards to multiple smaller boiler being installed to benefit from better tariffs.

I am on leave for the rest of the week so have copied Valerio and Nigel in, as they are seeking resolution for poultry sheds and Personal Information respectively. If you are happy with this definition could you please let Valerio and Nigel know so they can proceed

Thanks

Joe
