New Scheme Development

Update on Schemes

- FITs:
 - Now around 90,000 installations – double projections
 - DECC rapidly making changes to reduce scheme costs
 - Large PV tariffs reduced 1 August; Extensions loophole closed 18 Oct.
 - DECC about to consult on reducing small PV tariffs, introducing energy efficiency requirements etc
 - Further changes to be proposed later in the year
 - Additional funding needed from DECC to deal with all of this
- RO Sustainability:
 - Consultation on guidance document (for sustainability reporting requirements for biosolids and biogas) closes on 8 November
- NI RHI:
 - Feasibility study well underway, expected to be complete end November
 - DETI has consulted on proposals – broadly similar to GB RHI, but with reduced tariffs, restrictions for large industrial sites, and possibly including air source heat pumps

Notes Summary:

No speaker notes are contained in this presentation.
